## Alternative Performance Measures February 2018 Edition

## **Definitions of Alternative Performance Measures**

The Annual Review and other communication to investors contain certain financial performance measures, that are not defined by IFRS, that are used by management to assess the financial and operational performance of the Group, including Organic growth, Real internal growth, Pricing and Trading operating profit margin. Management believes that these non-IFRS financial performance measures provide useful information regarding the Group's financial and operating performance. Such measures may not be comparable to similar measures presented by other companies. The main alternative performance measures used by the Group are explained and reconciled below.

#### **Organic Growth (OG)**

**OG** combines Real internal growth and Pricing and represents the growth of the business after removing the impact of acquisitions and divestitures and other changes in Group scope of activity, and exchange rate movements. This provides a "like-for-like" comparison with the previous year in constant scope and constant currency, enabling deeper understanding of the business dynamics which contributed to the Evolution of sales from one year to another.

For purposes of calculating OG (a) the sales of an acquired business are generally excluded for the 12 months following the business combination, but sales generated by post-acquisition geographic expansion of the business are included; and (b) sales of a divested business are removed from comparatives for the 12 months prior to the divestiture. Supply agreements related to the divested business are included in acquisitions and divestitures during a transitory period. The pricing impact of changes in the way that a business is transacted in an entire country (e.g. establishing a local operating company instead of exporting to a distributor, or vice versa) are included in acquisitions and divestitures, respectively.

The effects of changes in foreign exchange rates are calculated as the current year sales' values converted at the current year's exchange rates, less the current year's sales converted at the prior year's rates.

OG is included among the quantitative operational targets for the Group.

#### **Real Internal Growth (RIG)**

**RIG** represents the impact on sales of volume increases or decreases, weighted by the relative value per unit sold. It is calculated at the level of the individual product reference (stock keeping unit) per distribution channel, by comparing the weighted sales (this year's volumes valued at the prior year's prices in local currency) to the prior year's sales. At the product level, it is therefore primarily driven by changes in volume, while when aggregated at operating segments or Group level, it embeds the impact of the evolution of the product mix.

## Real Internal Growth (RIG) (continued)

Sales of newly launched products are included from the moment of launch which tends to increase RIG, while products which are discontinued have a negative impact on RIG since the historical sales continue to be included in the prior year comparatives. This reflects in a balanced way the impacts of renovation and innovation and the impact on sales coming from ongoing product rationalisation efforts.

As RIG is a component of OG, it excludes the impact of acquisitions and divestitures, and exchange rates.

RIG is included among the quantitative operational targets for the Group.

#### Pricing

Pricing is part of OG and represents the portion of sales growth caused by changes in prices over the period. It excludes the impact of RIG, as well as the impact of acquisitions and divestitures, and exchange rates.

Analysing pricing allows management to assess the degree to which inflationary or deflationary factors have contributed to sales evolution, and the degree to which cost changes have been passed to customers.

#### **Evolution of Sales**

The Group uses OG (including RIG and Pricing), exchange rate impacts, and the effects of acquisitions and divestitures in order to understand the Evolution of sales from one year to the prior year (either the increase or the decrease in the current year's sales compared with the prior year's sales, expressed as a percentage).

Total Group			
	2017	2016	2015
Sales (in millions of CHF)	89 791	89 469	88 785
Evolution vs prior year (in %)	+0.4%	+0.8%	(3.1%)

The reconciliation of OG to the total Evolution of sales is as follows:

#### Total Group

In %

	2017 vs 2016	2016 vs 2015
Real Internal Growth	+1.6%	+2.4%
Pricing	+0.8%	+0.8%
Organic Growth	+2.4%	+3.2%
Effect of exchange rates	(0.1%)	(1.6%)
Effect of acquisitions, divestitures and other changes in Group scope activity	(1.9%)	(0.8%)
Evolution of sales	+0.4%	+0.8%

### **Underlying Trading Operating Profit Margin**

Underlying Trading operating profit margin is when Underlying Trading operating profit is calculated as a percentage of sales. Underlying Trading operating profit is Trading operating profit before the impact of Other trading expenses and Other trading income (mainly restructuring costs, impairment of property, plant and equipment, and litigations and onerous contracts). See note 4 of the Consolidated Financial Statements of the Nestlé Group 2017 for more details of Other trading expenses and Other trading income. (https://www.nestle.com/asset-library/Documents/Library/Documents/Financial\_Statements/2017-financial-statements-en.pdf)

The exclusion of these items allows tracking and better understanding and prediction of the results due to the day-to-day trading activities under the control of the operational management in the business units. It excludes the impacts of decisions (such as factory closures, disposal of a piece of real estate, or restructuring plans) made in conjunction with Zone or GMB management, or litigations and disputes or events which distort the underlying performance due to their frequency or the unpredictability of the outcome.

The reconciliation of Underlying Trading operating profit to Trading operating profit is as follows:

#### **Total Group**

In millions of CHF except for Underlying Trading operating profit margin

	2017	2016
Trading operating profit	13 233	13 693
Add:		
Other trading income	(111)	(99)
Other trading expenses	1 607	713
Underlying Trading operating profit	14 729	14 307
Sales	89 791	89 469
Underlying Trading operating profit margin	16.4%	16.0%

#### **Trading Operating Profit Margin**

Trading operating profit margin is when Trading operating profit is calculated as a percentage of sales. Trading operating profit is a subtotal in the Consolidated income statement, appearing above Operating profit. It excludes Other operating income and Other operating expenses. The items excluded from Trading operating profit represent the results of transactions and decisions taken at Group level and are largely out of control of management of the operating segments (such as acquisitions, disposals or strategic alliances), or the impacts of events which are irregular in nature and difficult to predict (such as wars or natural disasters).

Trading operating profit margin is included among the quantitative operational targets for the Group.

## **Trading Operating Profit Margin in Constant Currency**

Trading operating profit margin in constant currency is calculated as the ratio between Trading operating profit (see above) and Sales, adjusted to eliminate the impact of changes in exchange rates.

When comparing the year-on-year change in Trading operating profit margin, it is useful to eliminate the impact of changes in exchange rates in order to isolate the results generated by business operations from the effect of translation of these results into Swiss francs. This is done by converting both Sales and Trading operating profit of the current year at the exchange rate of the prior year. The resulting Trading operating profit margin of the prior year to understand fundamental business trends.

The reconciliation of Trading operating profit to Trading operating profit margin in constant currency is as follows:

#### Total Group

In millions of CHF except for Trading operating profit margin

	2017	2016
Trading operating profit	13 233	13 693
Retranslation at prior year rates	63	198
Trading operating profit in constant currency	13 296	13 891
Sales	89 791	89 469
Retranslation at prior year rates	74	893
Sales in constant currency	89 865	90 362
Trading operating profit margin (as reported)	14.7%	15.3%
Reported evolution (in basis points)	-60 bps	+ 20 bps
Trading operating profit margin in constant currency	14.8%	15.4%
Evolution in basis points compared to prior year as reported Trading operating profit margin	–50 bps	+30 bps

#### **Underlying Earnings Per Share (EPS)**

Underlying EPS is calculated by adjusting Net profit attributable to shareholders of the parent to remove the effects of Other trading income and Other trading expenses, Other operating income and Other operating expenses, and related tax effects. An adjustment is also made to eliminate Other trading income and other trading expenses and Other operating income and other operating expenses included in the Income from associates and joint ventures.

Underlying EPS reflects the underlying earnings from trading operations for each share of Nestlé S.A.

### **Underlying Earnings Per Share (EPS) in Constant Currency**

Underlying EPS in constant currency is used when comparing the year-on-year change in Underlying earnings per share to eliminate the impact of changes in exchange rates in order to isolate the results generated by business operations from the effect of translation of these results into Swiss francs. This is done by converting the Underlying EPS of the current year at the exchange rate of the prior year. The resulting figure can therefore be compared with the Underlying EPS of the prior year to understand fundamental business trends.

Underlying EPS in constant currency is one of two performance measures used in the Performance Share Unit long-term incentive Plan.

The reconciliation of Net profit to Underlying EPS in constant currency is as follows:

#### **Total Group**

In millions of CHF except for data per share or number of shares

	2017	2016
Net profit attributable to shareholders of the parent	7 183	8 531
Add:		
Restructuring costs	673	300
Impairment of property, plant and equipment, goodwill and intangible assets	3 557	640
Net result of disposal of businesses	132	
Other adjustments in net other income/(expenses)	255	204
Adjustment for income from associates and joint ventures	265	241
Tax effect on above items and adjustment of one-off tax items	(1 065)	610
Adjustment in non-controlling interests	(21)	(27)
Underlying net profit	10 979	10 499
Retranslation at prior year rates	11	74
Underlying net profit in constant currency	10 990	10 573
Weighted average number of shares outstanding (in millions of shares)	3 092	3 091
Underlying EPS (as reported)	3.55	3.40
Underlying EPS in constant currency	3.55	3.42
Evolution in % compared to prior year as reported Underlying EPS (unrounded)	+4.7%	+3.4%

### **Net Financial Debt**

Net financial debt represents the net level of financial debt contracted by the Group with external parties (e.g. bonds, commercial papers) after considering cash and investments readily convertible into cash. It is composed of the current and non-current financial debt less cash and cash equivalent and short-term investments. See Note 16.6 of the Consolidated Financial Statements of the Nestlé Group 2017 for the composition of Net financial debt and a reconciliation of the year-on-year Net financial debt evolution. (https://www.nestle.com/asset-library/Documents/Library/Documents/Financial\_Statements/2017-financial-statements-en.pdf)

See Note 12.2e of the Consolidated Financial Statements of the Nestlé Group 2017, for more details on the monitoring of the Net financial debt.

## Adjusted Earnings Before Interest, Tax, Depreciation and Amortisation (Adjusted EBITDA)

Adjusted EBITDA is used as a measure of the ability of the Group to generate enough cash from earnings to repay its net financial debt. It is computed as follows:

#### Total Group

In millions of CHF

	2017	2016
Trading operating profit	13 233	13 693
Add:		
Net other trading income/(expenses)	1 496	614
Depreciation and amortisation	3 227	3 132
Adjusted EBITDA	17 956	17 439

When Net financial debt is divided by Adjusted EBITDA, this yields a ratio which is used to monitor the Group's financing capacity.

#### **Free Cash Flow**

Free cash flow equals Operating cash flow less capital expenditure, expenditure on intangible assets, investments (net of divestments) in associates and joint ventures, and other investing activities. It represents the cash generating capability of the Group to pay dividends, repay providers of capital, or carry out acquisitions, if any.

See Note 16.6 of the Consolidated Financial Statements of the Nestlé Group 2017 for a reconciliation of Operating cash flow to Free cash flow.

(https://www.nestle.com/asset-library/Documents/Library/Documents/Financial\_Statements/2017-financial-statements-en.pdf)

#### **Return on Invested Capital (ROIC)**

Return on invested capital is a measure of performance which integrates both measures of profitability and measures of capital efficiency.

The numerator is Trading operating income before Litigations and onerous contracts, Other trading expenses and other trading income. This figure is divided by average Invested capital during the year. Invested capital is a measure of the operational assets used to generate the results of the business, excluding financing, tax and cash-management activities. Further details of the definition of Invested capital can be found on Note 3 of the Consolidated Financial Statements of the Nestlé Group 2017.

(https://www.nestle.com/asset-library/Documents/Library/Documents/Financial\_Statements/2017-financial-statements-en.pdf)

## Return on Invested Capital before Goodwill and Intangible Assets

Return on invested capital before Goodwill (GW) and Intangible assets (IA) is used to eliminate the distortions caused by the different treatments of goodwill in the past and internally and externally generated intangible assets. This removes from the analysis the impact of different levels of acquisition over time.

This measure is calculated by removing the average goodwill and intangible assets value from the average invested capital (see above).

# Return on Invested Capital before Goodwill and Intangible Assets (continued)

The calculation of Return on invested capital is shown below:

#### Total Group

In millions of CHF

	2017	2017	2016	2016
	Before GW & IA	After GW & IA	Before GW & IA	After GW & IA
Trading operating profit	13 233	13 233	13 693	13 693
Add:				
Net other trading income/(expenses)	1 496	1 496	614	614
Underlying Trading operating profit	14 729	14 729	14 307	14 307
Less:				
Impairment of property, plant and equipment	(366)	(366)	(157)	(157)
Restructuring costs	(673)	(673)	(300)	(300)
Impairment of intangible assets (excluding goodwill				
and non-commercialised intangible assets)		(152)		(44)
Impairment of goodwill and non-commercialised				
intangible assets		(3 039)		(439)
Trading operating profit before litigation				
and miscellaneous trading income/(expenses)	13 690	10 499	13 850	13 367
Theoretical tax 30%	(4 107)	(3 150)	(4 155)	(4 010)
Net Trading operating profit before litigation				
and miscellaneous trading income/(expenses)	9 583	7 349	9 695	9 357
Average Invested capital (Note 3.2)	30 353	30 353	30 596	30 596
Average goodwill and intangible assets (Note 3.2)		51 931		52 592
Average Invested capital, goodwill and intangible assets		82 284		83 188
ROIC	31.6%	8.9%	31.7%	11.2%
