- *Perrier* is available unflavoured in glass, PET and cans, flavoured and also in limited edition designer bottles and cans – discover *Perrier*.
- “Mineral water is a natural resource which is continually being replaced as rainwater and snow seep into the soil and subsoil. Every natural mineral water is slowly filtered by rocks and sand, from which it derives its mineral content (calcium, magnesium, potassium, etc.). Subterranean in origin, protected from human pollution and by being bottled at the source, natural mineral water is clear, and characterized by original purity and a unique mineral salt content that remains stable over time. In fact, it is the only type of water that boasts the health-giving properties recognized by France's Academy of Medicine.”
